Version 0.2

Release 0.2.0a1.dev1+gd0359a8

This extension adds a single role to the reStructuredText parser of [Sphinx](#).

:version-ref:

version-ref takes its argument, replaces all occurrences of {version} in it by the string set by the version configuration variable and similarly for all occurrences of {release}. Then it will process its argument as if it were a normal URI (uniform resource identifier).

Example

Some text in which I would like to reference to this specific version's repository :version-ref:`See version {version} here!
<https://github.com/max-sn/sphinx_version_ref/tree/{release}>`

Some text in which I would like to reference to this specific version's repository [See version 0.2 here!](#)

CHAPTER 2

Usage

In your `conf.py` file:

```
release = '0.2.0-a'  
version = '.'.join(release.split('.')[:2])  
extensions = ['sphinx_version_ref']
```

Where version can of course be any string. The following uses of `<ref>` then will be parsed as:

Entered as <code><ref></code>	Parsed as	Resulting in
<code>https://docs.com/{version}/index.html</code>	<code>`https://docs.com/0.0/index.html`_</code>	https://docs.com/0.2/index.html
<code>Repo version {version} <http://github.com/user/project/tree/{release}></code>	<code>`Repo version 0.0 <http://github.com/user/project/tree/0.1.0a0>`_</code>	Repo version 0.2

CHAPTER 3

Changelog

- : Switched to semantic versioning³
- : Link ‘downloads’ badge to pypistats.org
- : Added a change log using releases²
- : Included a `readthedocs.yml` build specification
- : Report correct version to Sphinx
- : Added `{release}` example to documentation
- : Fixed heading level
- : Removed coffee badge
- : Rename master doc to index to help RTD find the homepage.
- : Initial functionality
- : Added documentation on RTD (Read The Docs)¹
- : Use `setuptools_scm` for versioning
